

Introduction to GIS with ArcGIS Pro

Controlling Feature Display and Selection: Managing Feature Visibility

Session 10

Palash Basak, PhD

Lecture Outline

- Introduction & Recap (5 minutes)
- Managing Feature Visibility (45 minutes)
- Guided Exercise & Q&A (10 minutes)

Week 3: Coordinate Systems

- **Class 5:** Understanding Coordinate Systems
- **Class 6:** Managing Projections and Transformations

Week 4: Symbolizing Layers

- **Class 7:** Fundamentals of Symbology
- **Class 8:** Applying Different Symbology Methods

Week 5: Controlling Feature Display and Selection

- **Class 9:** Selecting Features with Queries
- **Class 10:** Managing Feature Visibility 
- **Milestone:** Assignment 1 (Data Creation and Mapping) will be assigned.

Recap of Season 9

- **Interactive** feature selection
- Select features using **attributes**
- Select features by **location**
- Work with **selected features**
- **Query expressions**

Managing Feature Visibility

in ArcGIS Pro

Toggle Layer Visibility Manually

- In the Contents pane, use the check box next to a layer name to turn its display on or off.

Feature Visibility by Layer Groups

- Turn all layers in the group on or off simultaneously

Scale ranges

- Set scale ranges to control when a layer appears based on zoom level.

Transparency

- Adjusting transparency for visual blending.

Filter features with definition queries

- Definition queries allow you to define a filter that limits which features are retrieved from the dataset by the layer.
- A definition query affects not only drawing, but also which features appear in the layer's attribute table and can be selected, labeled, identified, and processed by geoprocessing tools.

The screenshot shows the 'Definition Query' tool interface. At the top, there is a green checkmark icon and the text 'Grouping'. To the right, there is a toggle switch labeled 'SQL Editor' which is currently turned off. Below this, the query is built using a series of clauses. The first clause is 'Where Country is equal to China'. The second clause is 'And Population is greater than 100000'. The third clause is 'Or Status is equal to Provincial capital'. Each clause is contained in a box with a red 'X' icon in the top right corner. At the bottom, there is a green plus icon and the text '+ Add Clause'.

Display filter

- Use display filters to show subsets of features without removing them from the layer.
- Display filters are queries that limit which features of a feature layer are displayed on a map or scene.
- Display filters can be determined by scale or set manually.

Exercise

Exercise

1. Create a Layer Group and experiment with layer visibility.
2. Apply a definition query to hide features from a layer.

Sample Shapefiles - City of Newcastle, Australia
